Accurate and Timely Submittal of the Rocky Flats Environmental Technology Site Air Operating Permit Application to the Colorado Department of Public Health and Environment

Anson H. Burlingame
President
EG&G Rocky Flats, Inc.

The Rocky Flats Field Office (RFFO) is required to submit an air operating permit application to the Colorado Department of Public Health and Environment for the Rocky Flats Environmental Technology Site (Site). This requirement is contained in Colorado Air Quality Control Regulation Number 3 and is based on the Clean Air Act Amendments of 1990 - Title V, which establishes a state implemented operating permit program for all major sources of regulated air pollutants.

The air operating permit application must identify operations and emission levels, applicable air pollution controls and regulatory requirements, and current compliance status and reporting strategies for all sources of air emissions at the Site. The application must also provide for operational flexibility for current emissions sources and emissions from operations anticipated over the next five years including economic development, liquid stabilization, special nuclear material repack, facility deactivation, waste disposal and excess material disposition. Failure to include anticipated emissions in the application may result in unacceptable restraints on existing operations and/or substantial delays or termination of future projects.

Because of the impact the air operating permit will have on the Site, RFFO requests that EG&G provide adequate resources and funding to assure an accurate and timely application submittal. This would include affected operations and program groups that will provide the necessary input for the permit application.
